

Altiris™ IT Analytics Symantec Endpoint Protection Pack

Advanced Data Analysis for Improved Security

Overview

The Altiris™ IT Analytics Symantec Endpoint Protection Pack complements and expands upon the traditional reporting offered by Symantec™ Endpoint Protection by incorporating multi-dimensional analysis and robust graphical reporting features. This allows users to explore data on their own, without advanced knowledge of databases or third-party reporting tools, empowering them to ask and answer their own questions quickly, easily, and effectively.

Going beyond ordinary reporting

More access, more information

To manage and continuously improve the security of your environment, you need to measure it effectively. However, to make informed business decisions, you need the right information at the right time. Without timely access to data or visibility beyond pre-formatted reports, you run the risk of decisions being made too late or based on educated guesses rather than real actionable information.

IT Analytics Solution was architected as a method of representing the information and relationships at the core of the IT decision-making process. The result is a robust multidimensional model that provides an entirely new way to explore and view IT data. Users can now answer dynamic sequences of questions as fast as they can be asked.

Analytics provide a starting point for users to explore data and allow them to ask and answer their own questions. In most cases, analytics provides a fluid mechanism to run subsequent queries that are generated by the user, such

as drilling down, drilling up, pivoting, and active filtering. It's making the most of more information.

Optimize your Symantec™ Endpoint Protection investment

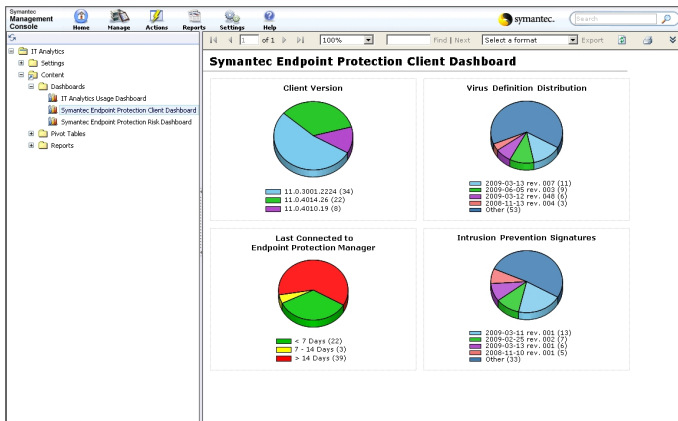

IT Analytics Solution grants you unprecedented access to your Symantec Endpoint Protection data so you can make informed decisions about your organization's security. The IT Analytics Symantec Endpoint Protection Pack is an advanced reporting solution that leverages sophisticated business intelligence capabilities and graphical reporting to provide a unified and comprehensive view of Symantec Endpoint Protection data. This allows you to gain valuable insight before threats occur, and proactively identify risks to your environment.

Furthermore, IT Analytics Solution provides full integration between Symantec Endpoint Protection data and the Symantec CMDB. This affords shared Altiris and Symantec clients additional value that includes viewing inventory data alongside virus scan information such as the ability to obtain a complete breakdown of computers with the Symantec Endpoint Protection Client by version, virus, OS, scan date, category of alert, and more.

As a result, the solution offers you an entirely new way to explore and view your IT data. Focus is shifted to thought leadership and positive change within the organization, instead of toiling over complex reports and basing decisions on assumptions or incomplete data.

Key benefits

- Complements existing Symantec Endpoint Protection relational reporting with fast and flexible analytics
- Provides a unified view of data from multiple Symantec Endpoint Protection databases
- Powerful on-the-fly ad-hoc reports and charts with pivot tables
- Visually informative dashboards and trend reports
- Key Performance Indicators to quickly measure critical success factors

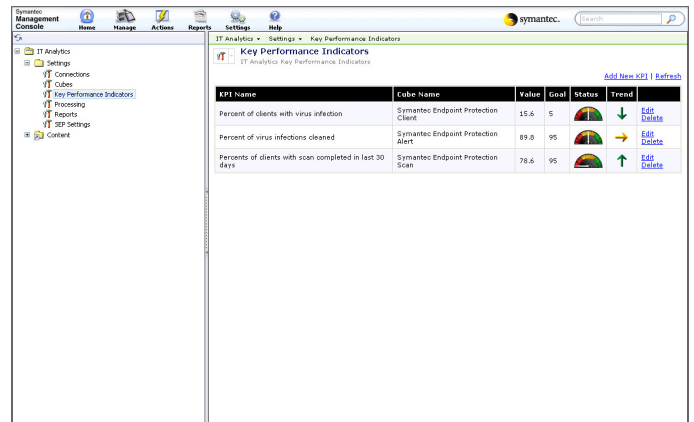

Convenient dashboards easily allow you to view a top-level summary of essential Symantec Endpoint Protection data at a glance.

Key features

- Pivot tables - Using pivot tables you can construct reports based on predefined measures and dimensions.
- Key Performance Indicators - Use Key Performance Indicators to measure critical success factors for your organization, and quickly assess trends of how these measures are changing over time.
- Time Series & Trend Analysis - Analyze the historical and ongoing trends within your environment, including

trends of virus infections, spyware/malware infestations, and hacker attacks. As a result, predict and influence future trends.

- Dashboards & Reports - View dashboards and reports that provide a representative view of your environment, allowing you to make strategic decisions to combat potential security threats. Reports can be exported to many different formats, including HTML, Excel, and .PDF.
- Third-party reporting products - Third party reporting tools that provide rich cube browsing or cube reporting capabilities can be used to report on the data contained in each cube.

Use Key Performance Indicators to measure critical success factors for your organization and quickly identify trends and areas of concern
